

Clinical Fundamentals for Anterior Restorations; All About the Details

Course Objectives:

Upon completion of this hands on program, the participant will be able to:

- Review all components of adhesive dentistry and how each impacts long-term success.
- Learn why a consistent chairside protocol for direct anterior restorations leads to predictable results and why failure occurs.
- Differentiate total-etch, self-etch and universal/selective etch and when best to use each.
- Match the viscosity of material to preparation
- Plan an anterior direct bonding case while reviewing fundamentals of anatomy.
- Demonstrate new techniques for placement and contouring of anterior restorations.

Featuring Step By Step Guidelines-Designed for durable, predictable, esthetic restorations

- Class III, IV and V restorations
- Diastema closures
- Direct Veneers
- Matrix/Teflon Tape/Wedge placement
- Finishing and Polishing
